

# Solo Keyboard

Standalone Labeling Solution

## The Ultimate Standalone Labeling Solution

### Streamlined Features

- Print variable labels without a PC or any programming
- Unique WYSIWYG design
- Powerful variable data features and database integration
- Minimal maintenance, training and support
- Durable construction suitable for industrial environments
- Lightning-fast printing
- TrueType fonts and scalable symbol library
- Compatible with external input devices such as scanners and weigh scales
- Drives most thermal transfer and direct thermal printers

### Available For

- GT408/412/424e
- CL608/612e
- CLe RFID
- CG4 Series
- M84Pro
- M84Se Series
- LM4e Series
- S84 Series
- TG3 Series
- Lt408 Engine
- CL408/412e
- Argox X Series
- M5900RvE
- Argox OS Series
- M10e
- Argox CP Series

### Solo Keyboard Features

SOLO is a unique keyboard and software solution which allows sophisticated labels to be designed on a PC and transferred to the keyboard for PC-independent printing.

This makes SOLO ideal for warehouses, factories, production and packing areas, mobile applications or any situation where a PC is unsuitable.

#### Simple

Every aspect of SOLO is designed for ease of use. Just install the software and plug the SOLO keyboard into your PC and you're ready to create your labels.

Each SOLO solution includes SOLO Studio—a powerful PC design program allowing you to design labels in an intuitive WYSIWYG environment. SOLO Studio provides intuitive tools for adding barcodes, images, TrueType fonts and symbols allowing you to create label templates in minutes and then transfer them to the keyboard at the click of a button.

To print your labels, just select the name of your label from the list in the keyboard and enter the required information when prompted on the keyboard display.

#### Powerful

SOLO Studio offers almost every feature found in leading PC-based labeling programs with the benefit of standalone flexibility. The software boasts a wide range of tools and options giving full control of each printer's internal features.

Variable information such as serial numbers, keyboard input and database records can be easily configured using simple, on-screen options. Using SOLO Studio's macroscript facility, advanced dynamic features can be added to your label for creating EAN128 barcodes, SSCC labels, custom check digits, real time calculations and conditional statements.

#### Flexible

SOLO's robust standalone keyboard is powered by the printer via RS232 interface and can be used in virtually any situation. Compatible devices include hand-held scanners and weigh scales making the SOLO keyboard a versatile solution with countless applications across many industries including logistics, pharmaceuticals, retail, catering, automotive and many others.

#### Cost Effective

SOLO offers a highly cost effective alternative to PC labeling or outsourcing. Printing labels from the SOLO keyboard is so simple, staff can be trained in minutes.

SOLO is currently available for the SATO CG4 series and the following SATO 'e' series tabletop printer models: CLe, GTe, M10e, M84Pro, M5900Rve, TG3, LM4e with RS232 interface (SAI p/n 11S000185 required). SOLO is also available for the SATO Argox X, CP and OS Series printers.
